Preface

Special Issue of the 2013 International Applied Science and Precision Engineering Conference

This Special Issue presents 13 papers selected from the proceedings of the 2013 International Applied Science and Precision Engineering Conference (ASPEC2013) which was held from November 18 to 22, 2013, at Sun Moon Lake in central Taiwan. ASPEC2013 covers a wide range of fundamental studies, technical innovations and industrial applications by applying the knowledge of applied science, technology, and techniques. This conference enables interdisciplinary collaboration between science and engineering technologists in the academic and industrial fields as well as networking internationally.

All papers submitted to the conference were first examined by at least two independent reviewers prior to the conference, when selected, then subsequently undergone a rigorous peer-review process. Acceptance into this Special Issue was based on the recommendation by the reviewers and mandatory changes and final examination by the Guest Editor. This collection of papers is expected to be a key issue related to recent engineering innovations for industrial engineers and academic researchers.

Lastly, I would like to sincerely thank all contributed authors and reviewers. I would also like to acknowledge the secretariat of the JMST who helps with the process of publishing this issue. Special thanks must be given to the Editor in Chief of the JMST for his kind support to the publication of this issue.

Wen-Hsiang Hsieh
Guest Editor of the Special Issue
Professor of Department of Automation Engineering
National Formosa University, Taiwan, R.O.C.
