ABSTRACT

A series of field collections of fishes were made in the Matang mangrove, Malay Peninsula in April 2011. At least 23 genera and 27 species of gobioid fishes including a new *Pseudogobius* species were collected and recorded in this region during the expedition. The checklist of gobioid fauna and available materials are provided herein, and the formal description of a new goby species, *Pseudogobius fulvicaudus* Huang, Shao & Chen, new species will be provided and discussed in this paper.

I. INTRODUCTION

Gobioid fishes are the most species-rich group of marine teleost fishes [1, 16, 20, 24]. In tropical regions, many groups of gobioid fishes are well adapted to mangrove and estuarine habitats, which have high species diversity [44, 47, 48]. Yet, goby fauna has not been well surveyed in many tropical mangroves.

Sasekumar and Chong [63] published the book “Ecology of Klang Strait,” which reported some important gobies and documented local species of mangrove gobioid fishes around the Strait of Malacca, including more comprehensive faunistic survey data of different varieties of so-called “mudskippers”

around the Strait. Larson *et al.* [47] released a comprehensive faunistic list of gobioid fishes collected from the marine habitat of Singapore, which provided useful fish data for the southern tip of the Malay Peninsula.

However, except for the research work mentioned above, few field survey data have been published for the small-sized mangrove gobies, especially in the Indian Ocean side of the Strait of Malacca. The mangrove of Matang is the largest mangrove forest of the Malay Peninsula. Situated at the northern region of the Peninsula, with over forty thousand hectares of coverage, this productive area is the subject of our 2011 fish collecting expedition. Despite the difficulty in reaching the muddy habitats around the mangrove of Matang in the northern region of the Strait of Malacca, our research team employed local fishing boats to go further into small river channels and the banks of estuarine mangrove habitats and we successfully conducted both hand netting and trawling for our fish collections. The detailed checklist and available materials are provided in this paper. Our expedition will contribute data to the benthic fish fauna around the mangrove region of the tropical Malay Peninsula.

About the taxonomic study of *Hemigobius* generic group, present study reveals *Pseudogobius gastrospilos* (Bleeker, 1853) [8] should be considered as senior synonym of *Pseudogobius melanostictus* [22, 36], and present study supporting that *Mugilogobius polylepis* Wu and Ni, 1985 [69], which is distributed in Taiwan and southern China should be an new genus based on specific morphological features and strongly molecular evidence [35]. For the taxonomic study of new species during our expedition in Malay Peninsula, there are two species of *Pseudogobius* were collected in this region during the expedition, including *Pseudogobius avicennia* (Herre, 1940) [31] and another smaller size of *Pseudogobius* species, which one has been recognized as an undescribed species after examination and comparison of related species.

Paper submitted 10/30/13; revised 12/10/13; accepted 12/19/13. Author for correspondence: I-Shiung Chen (e-mail: isc@ntou.edu.tw).

The comparison of this new *Pseudogobius* species and related species will be provided in this paper.

II. MATERIALS AND METHODS

All gobioid fish specimens were collected either by hand net from intertidal pools or small drainages at low tide, or by trawling the main reaches of estuaries in local fishing boats. All counts and measurements were made from specimens preserved in 70% ethanol. Morphometric methods follow Miller [54] and meristic methods follow Akihito *et al.*, Chen and Shao, Chen *et al.*, Chen and Kottelat, Chen and Miller and Huang and Chen [1, 17-20, 34]. Terminology of cephalic sensory canals and free neuromast organs (sensory papillae) is from Wongrat and Miller [68], based on Sanzo [62]. Fish specimens as well as assigned type material are deposited at the Institute of Marine Biology, National Taiwan Ocean University, Keelung, Taiwan (NTOUP).

Meristic abbreviations are as follows: A, anal fin; C, caudal fin; D1 and D2, first and second dorsal fins, respectively; LR, longitudinal scale series; P, pectoral fin; PreD, predorsal scales; SDP, scale series from origin of first dorsal fin to upper pectoral origin; TR, transverse scale series from second dorsal to anal fin; V, pelvic fin; VC, vertebral count. All fish lengths are standard length (SL).

III. TAXONOMY

FAMILY Eleotridae

Bostrychus scalaris Larson, 2008 (Fig. 1a)

Pseudogobius fulvicaudus Huang,

Shao & Chen, new species

(Tables 1, 2, Figs. 2e, 3)

Material examined:

Holotype: NTOUP 2011-05-006, 15.8 mm SL, male, Matang mangrove, Malaysia, coll. I-S. Chen and S. P. Huang, 20 April, 2011.

Paratypes: Data same as holotype. ASIZP 0072334, 5 specimens, 15.9-17.1 mm SL; data same as holotype. NTOUP 2011-05-007, 20 specimens, 15.1-19.0 mm SL; data same as holotype. NTOUP 2011-05-021, 12 specimens, 15.3-17.4 mm SL, Matang mangrove, Malaysia, coll. I-S. Chen and S. P. Huang, 21 April, 2011.

Diagnosis

Pseudogobius fulvicaudus n. sp. is well distinguished from other congeners by the unique combinations of the following features: (1) fin rays: D2 I/7, A I/6-7 (modally 7), P 14-15 (modally 15) and first dorsal fin lacking filaments; (2) squamation: lateral body with large ctenoid scales, longitudinal scale rows 25-26, predorsal scales 6; (3) specific coloration: body with 4-5 main oblique black bars, caudal fin base with 2 black spots; first dorsal fin with a rear black blotch, and caudal fin base with a large semicircular bright yellow mark.

Description

Body elongate, subcylindrical anteriorly and compressed posteriorly. Head large. Snout more prominent than upper lip. Eyes rather large. Mouth small, maxillary extending to the vertical of anterior margin of eye. Anterior nasal as short tube, posterior nasal as round hole. Gill-opening restricted, extending ventrally slightly beyond the middle vertical line of opercle. VC 10 + 16 = 26 (in 7).

Fins

D1 VI; D2 I/7; A I/6-7 (modally 7); P 14-16 (modally 15). First dorsal fin lacking any filamentous rays. Anal fin inserted below first branched rays of second dorsal fin. Pelvic fin large and rounded. Rear margin of caudal fin rounded.

Scales

LR 25-26; TR 7; PreD 6; SDP 5. Body covered with rather large ctenoid scales. Predorsal region with cycloid scales. Belly with smaller cycloid scales. Cheek naked. One row of cycloid scales on upper region of opercle.

Table 1. Morphometric measurements of *Pseudogobius fulvicaudus* n. sp. from Matang mangrove, Malaysia.

Characters n	<i>Pseudogobius fulvicaudus</i> n. sp.							
	Male 6		Female 6					
Percent standard length (%)								
Head length	26.4	—	27.9	(27.2)	24.7	—	26.1	(25.4)
Predorsal length	34.2	—	35.1	(34.6)	34.3	—	36.2	(35.1)
Snout to 2nd dorsal origin	51.8	—	53.8	(52.9)	51.8	—	53.1	(52.4)
Snout to anus	45.0	—	47.1	(46.0)	49.5	—	52.9	(51.2)
Snout to anal fin origin	53.1	—	56.1	(54.9)	53.9	—	56.9	(55.7)
Prepelvic length	23.5	—	25.3	(24.6)	24.6	—	26.9	(26.0)
Caudal peduncle length	30.5	—	32.0	(31.1)	30.9	—	31.6	(31.1)
Caudal peduncle depth	10.0	—	11.9	(10.9)	10.6	—	11.4	(11.0)
1st dorsal fin base	12.5	—	13.4	(12.7)	11.3	—	12.2	(11.9)
2nd dorsal fin base	15.6	—	17.3	(16.6)	14.4	—	16.1	(15.1)
Anal fin base	15.0	—	16.9	(15.9)	14.0	—	15.4	(14.8)
Caudal fin length	29.5	—	32.1	(30.7)	25.5	—	27.9	(26.8)
Pectoral fin length	21.3	—	23.8	(23.0)	20.4	—	21.8	(21.2)
Pelvic fin length	19.5	—	20.9	(20.4)	17.1	—	18.1	(17.8)
Body depth at pelvic fin origin	15.6	—	17.4	(16.5)	16.4	—	17.7	(16.9)
Body depth at anal fin origin	14.0	—	15.4	(14.8)	15.8	—	16.6	(16.2)
Body width at anal fin origin	8.2	—	9.1	(8.7)	11.5	—	12.0	(11.7)
Pelvic fin origin to anus	24.3	—	26.7	(25.4)	27.0	—	28.9	(27.7)
Percent head length (%)								
Snout length	26.0	—	28.0	(27.1)	24.9	—	26.5	(25.9)
Eye diameter	28.1	—	29.3	(28.8)	30.2	—	32.1	(30.8)
Cheek depth	25.7	—	26.8	(26.4)	23.3	—	24.6	(24.0)
Postorbital length	47.3	—	50.6	(49.2)	46.7	—	49.9	(48.2)
Head width in maximum	72.2	—	74.8	(73.7)	72.4	—	75.7	(74.3)
Head width in upper gill	48.2	—	50.7	(49.8)	52.8	—	55.6	(53.8)
Bony interorbital width	12.2	—	13.7	(12.8)	11.0	—	12.4	(11.8)
Fleshy interorbital width	28.1	—	30.5	(29.5)	30.6	—	32.2	(31.3)
Lower jaw length	38.6	—	41.9	(40.6)	37.5	—	39.9	(38.8)

Head lateral-line system

Head canals- Anterior oculoscapular canal present, anterior termination with paired pores λ , a median interorbital pore κ ; paired postorbital pores ω , lateral termination with paired pores α . Posterior oculoscapular and preopercular canals entirely absent.

Sensory papillae- Row a short, about two third of eye diameter. Row b short with densely-set papillae, starting from the vertical of posterior margin of pupil. Single c papilla. Row cp with 3 papillae. Opercular rows with rows os , oi and ot . Rows oi and ot well separated. Row f with 4 papillae.

Coloration in life

Head and body generally creamy yellow, middle lateral with 5 mainly grayish brown blotches. Dorsal half with 4-5 oblique blackish brown bars, first oblique bar below middle

of first dorsal fin base. Lateral scales with blackish brown margin. Belly creamy white. Two conspicuous infraorbital blackish brown bars on cheek. Caudal fin base with 2 blackish brown bars vertical to each other. Pectoral fin base with a blackish brown blotch. First dorsal fin with a rounded black mark at rear, and a longitudinal orange to orange red bar above the dark mark. Anal fin pale white. Caudal fin creamy yellow to bright yellow, the yellow mark larger on adult males than on females. All other fins translucent and lacking deep marks.

Habitat

This new species can be found in the shallow tidal pools of the mangrove region of Matang, Malay Peninsula, muddy intertidal habitat.

Etymology

The specific name, *fulvicaudus*, is derived from Latin *fulvus* (meaning yellow) and *caudal* (meaning caudal fin), and is

Table 2. Frequency distribution of meristic features of *Pseudogobius fulvicaudus* n. sp. and other compared nominal species.

referring to the diagnostic character of a brilliant yellow mark on the caudal fin base in adult males.

Remarks

Previous study [42] reveals 6 species of *Pseudogobius* as valid as follows: *Pseudogobius poecilosoma* (Bleeker, 1849), *Pseudogobius javanicus* (Bleeker, 1856), *Pseudogobius melanostictus* (Day, 1876), *Pseudogobius olorum* (Sauvage, 1880), *Pseudogobius masago* (Tomiyama, 1936) and *Pseudogobius avicennia* (Herre, 1940) [5, 10, 22, 31, 64, 66]. Present study reveals *Pseudogobius gastrospilos* (Bleeker, 1853) should be considered as senior synonym of *Pseudogobius melanostictus* (Day, 1876) [36].

The new species, *Pseudogobius fulvicaudus* n. sp. can be easily separated from *Pseudogobius gastrospilos*, by the absence of any filamentous rays of first dorsal fin in adult males vs. the presence of 2nd and 3rd filamentous rays of first dorsal fin in adult males. *P. fulvicaudus* n. sp. can be easily distinguished from *Pseudogobius javanicus* by following features: (1) fewer counts of longitudinal scale rows 25-26 vs. 28-29; (2) absence of any filamentous rays of first dorsal fin in adult males vs. the presence of 2nd and 3rd filamentous rays of first dorsal fin in adult males.

P. fulvicaudus n. sp. can be easily distinguished from *Pseudogobius poecilosoma*, by following features: (1) fewer counts of second dorsal fin rays I/6-7 vs. I/8; (2) more counts of pectoral fin rays 14-15 (modally 15) vs. 12.

P. fulvicaudus n. sp. can be easily distinguished from *Pseu-*

dogobius olorum, by following features: (1) fewer counts of second dorsal fin rays I/6-7 vs. I/8; (2) fewer counts of longitudinal scale rows 25-26 vs. 32.

P. fulvicaudus n. sp. is similar to the two remaining congeneric species, *Pseudogobius masago* and *Pseudogobius avicennia*, in the lacking of filamentous rays of first dorsal fin in males and having almost spotless caudal fin.

However, *P. fulvicaudus* n. sp. can be distinguished from *Pseudogobius avicennia* by the following features: (1) larger body scales representing fewer counts of longitudinal scale rows 25-26 vs. 28-29; fewer counts of predorsal scales 6 vs. 9-10; (2) fin rays counts: pectoral fin modally 15 vs. 16; and (3) specific coloration pattern: presence of orange red longitudinal band on first dorsal fin vs. absence of any orange mark on first dorsal fin; absence of thin white margin on second dorsal and caudal fins vs. presence of thin white or creamy yellow distal margin on second dorsal and caudal fins; and two blackish brown spots on caudal fin base vs. one large blackish brown spot on caudal fin base.

P. fulvicaudus n. sp. can be distinguished from *Pseudogobius masago*, another small-sized fish (always less than 20 mm SL) by the following features: (1) larger body scales representing fewer counts of longitudinal scale rows 25-26 vs. 28-29; fewer counts of predorsal scales 6 vs. 8-10; (2) vertebral counts: modally 26 vs. 25; and (3) specific coloration: presence of horizontal orange red band as well as a large black blotch at rear vs. none of the above markings; a conspicuous, oblique blackish brown bar below first dorsal fin vs.

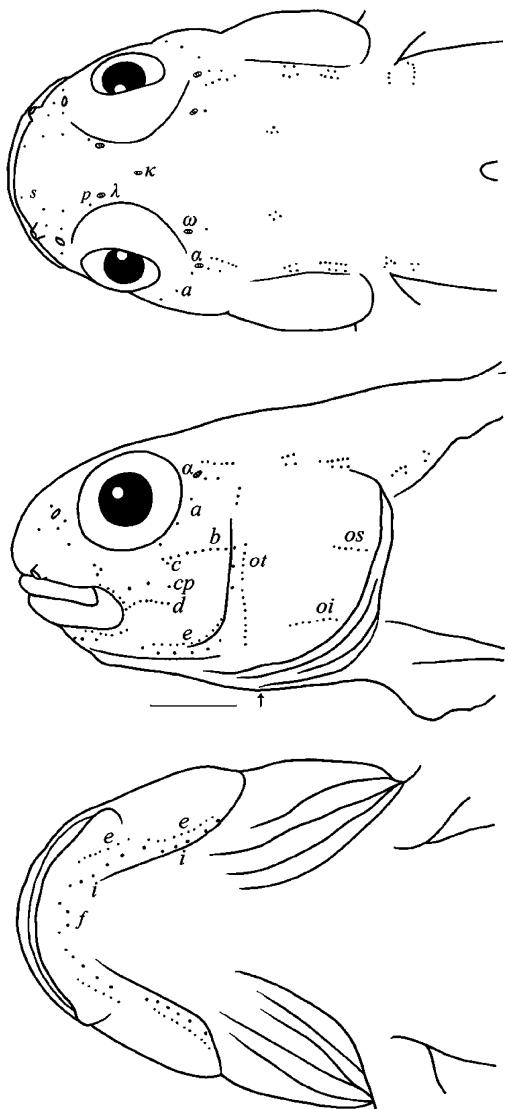

Fig. 3. Head lateral-line system of *Pseudogobius fulvicaudus* n. sp., NTOUP 2011-05-006, holotype, male, 15.8 mm SL. Bar = 1 mm.

absence of any distinct dark cross bars; and two blackish brown spots on caudal fin base vs. one large blackish brown spot on caudal fin base. This new species is of the smaller-sized fish in *Pseudogobius*; the record of its mature females with ripe eggs in ovary is 15.5 mm, minimum SL.

Other compared materials of nominal species of *Pseudogobius*

Pseudogobius avicennia (Herre, 1940)

NTOUP 2011-05-020, 12 specimens, 22.0-25.9 mm SL, Matang mangrove, Malaysia, coll. I-S. Chen and S. P. Huang, 21 April, 2011.

Pseudogobius gastrospilos (Bleeker, 1853)

Holotype-LEIDEN 4676, 29.7 mm SL, Batavia, Java, Indonesia.

NTOUP 2011-05-049, 20 specimens, 16.8-33.3 mm SL, estuary of Zhuan River, Toucheng Township, Yilan County, Taiwan, coll. S. P. Huang and H. M. Huang, 15 January, 2010; NTOUP 2011-05-050, 15 specimens, 21.5-34.6 mm SL, estuary of Zhuan River, Toucheng Township, Yilan County, Taiwan, coll. S. P. Huang and H. M. Huang, 22 March, 2010; NTOUP 2012-02-120, 15 specimens, 28.3-36.2 mm SL, estuary of Zhuan River, Toucheng Township, Yilan County, Taiwan, coll. S. P. Huang, 22 April, 2010; NTOUP 2012-02-123, 10 specimens, 20.1-30.5 mm SL, mangrove of Palau, coll. I-S. Chen and J. T. Chen, 17 November, 2006; NTOUP 2012-11-165, 3 specimens, 18.6-32.4 mm SL, Sai Yuan, Phuket Island, Thailand, coll. S. P. Huang, 23 November, 2012; NTOUP 2012-11-168, 8 specimens, 18.3-30.3 mm SL, Cherngtalay, Phuket Island, Thailand, coll. S. P. Huang, 23 November, 2012.

Pseudogobius javanicus (Bleeker, 1856)

NTOUP 2011-05-052, 12 specimens, 20.8-32.1 mm SL, estuary of Zhuan River, Toucheng Township, Yilan County, Taiwan, coll. S. P. Huang and H. M. Huang, 29 October, 2009; NTOUP 2011-05-054, 18 specimens, 19.3-29.1 mm SL, Beimen Township, Tainan County, Taiwan, coll. S. P. Huang and H. M. Huang, 2 March, 2010; NTOUP 2012-02-126, 20 specimens, 19.9-26.6 mm SL, mangrove of Liehyu Island, Taiwan, coll. S. P. Huang and N. H. Jang-Liaw, 24 November, 2011; NTOUP 2012-02-127, 8 specimens, 14.6-23.7 mm SL, mangrove of Hong Kong, coll. I-S. Chen, 22 November, 2011; NTOUP 2011-05-056, 52 specimens, 15.9-32.4 mm SL, Sungai Buloh mangroves, Singapore, coll. I-S. Chen, July, 2001; NTOUP 2012-11-164, 22.7 mm SL, Sai Yuan, Phuket Island, Thailand, coll. S. P. Huang, 23 November, 2012.

Pseudogobius masago (Tomiyama, 1936)

NTOUP 2010-11-568, 28 specimens, 17.1-21.0 mm SL, estuary of Puzi River, Dongshi Township, Chiayi County, Taiwan, coll. S. P. Huang and H. M. Huang, 2 March, 2010; NTOUP 2010-11-595, 30 specimens, 14.0-18.6 mm SL, estuary of Xiaofanli River, Guanyin Township, Taoyuan County, Taiwan, coll. S. P. Huang and H. M. Huang, 9 July, 2010; NTOUP 2012-02-119, 5 specimens, 21.9-24.5 mm SL, estuary of Jinsha River, Kinmen Island, Taiwan, coll. S. P. Huang, 19 May, 2010.

Redigobius chrysosomus (Bleeker, 1875)

(Fig. 2f)

Lophogobius chrysosoma Bleeker, 1875: 114 (Bandjermasin, Borneo; Ambon Island, Moluccas Islands, Indonesia) [12].

Redigobius chrysosoma, Allen, 1991: 192; Larson and Murdy, 2001: 3601 [3, 49].

Redigobius chrysosomus, Allen *et al.*, 2001: 284; Hoese and Larson, 2006: 1681; Larson 2010: 142 [4, 33, 46].

Material examined:

NTOUP 2011-05-018, 25.7 mm SL, Matang mangrove, Malaysia, coll. I-S. Chen and S. P. Huang, 21 April, 2011.

***Scartelaos histophorus* (Valenciennes, 1837)**

(Fig. 2g)

Beleophthalmus histophorus Valenciennes, 1837: 210 (Bombay and Ganges River) [67].

Boleophthalmus aucupatorius Richardson, 1845: 148 (Woo-sung and Canton, China) [61].

Scartelaos histophorus, Murdy, 1989: 51; Chen and Fang, 1999: 243; Lim and Larson, 1994: 261; Larson and Lim, 2005: 147 [16, 48, 50, 55].

Material examined:

NTOUP 2011-05-024, 54.2 mm SL, Sungai Haji Dorani, Malaysia, coll. S. P. Huang and H. M. Huang, 22 April, 2011.

***Stigmatogobius pleurostigma* (Bleeker, 1849)**

(Fig. 2h)

Gobius pleurostigma Bleeker, 1849: 28 (Surabaya, Java) [5].

Stigmatogobius pleurostigma, Lim and Larson, 1994: 261; Larson and Lim, 2005: 150; Larson, 2005: 358 [43, 48, 50].

Material examined:

NTOUP 2011-05-004, 5 specimens, 27.2-35.8 mm SL, Matang mangrove, Malaysia, coll. I-S. Chen and S. P. Huang, 20 April, 2011.

***Stigmatogobius sadanundio* (Hamilton, 1822)**

(Fig. 2i)

Gobius sadanundio Hamilton, 1822: 52 (estuaries near Calcutta); Herre and Myers, 1937: 38; Fowler, 1931: 448; Fowler, 1938: 218 [29, 26, 27, 32].

Stigmatogobius sadanundio, Koumans, 1953: 111; Lim and Ng, 1990: 116; Lim and Larson, 1994: 261; Lim and Low, 1998: 141; Larson, 2005: 361 [40, 43, 50, 51, 52].

Material examined:

NTOUP 2011-05-005, 25 specimens, 33.1-47.5 mm SL, Matang mangrove, Malaysia, coll. I-S. Chen and S. P. Huang, 20 April, 2011. NTOUP 2011-05-019, 29.8 mm SL, Matang mangrove, Malaysia, coll. I-S. Chen and S. P. Huang, 21 April, 2011.

***Taeniodoides gracilis* (Valenciennes, 1837)**

(Fig. 2j)

Amblyopus gracilis Valenciennes, 1837: 166 (Pondicherry, India) [67].

Amblyopus hermannianus Bleeker, 1861: 32 (Singapore) [11].

Taeniodoides coeculus Fowler, 1938: 222 (Singapore) [27].

Taeniodoides gracilis Fowler, 1938: 222; Lim and Larson, 1994: 261; Lim and Low, 1998: 142; Larson and Lim, 2005: 153 [27, 48, 50, 51].

Material examined:

NTOUP 2011-05-042, 115.8 mm SL, river mouth of Matang mangrove, Malaysia, coll. H. M. Huang, 20 April, 2011. NTOUP 2011-05-043, 104.6 mm SL, river mouth of Matang mangrove, Malaysia, coll. H. M. Huang, 21 April, 2011.

***Trypauchen pelaeos* Murdy, 2006**

(Fig. 2k)

Trypauchen pelaeos Murdy, 2006: 65 (South of Penang, south of Pu Kendi Island, 5°11'N, 100°10'E, Strait of Malacca, eastern Indian Ocean, Malaysia) [56].

Material examined:

NTOUP 2011-05-044, 50.2 mm SL, river mouth of Matang mangrove, Malaysia, coll. H. M. Huang, 20 April, 2011. NTOUP 2011-05-045, 4 specimens, 69.3-126.6 mm SL, river mouth of Matang mangrove, Malaysia, coll. H. M. Huang, 21 April, 2011.

***Trypauchen vagina* (Bloch and Schneider, 1801)**

(Fig. 2l)

Gobius vagina Bloch and Schneider, 1801: 73 (Tranquebar, India) [14].

Trypauchen vagina, Lim and Larson, 1994: 261; Larson and Lim, 2005: 154 [48, 50].

Material examined:

NTOUP 2011-05-029, 65.1 mm SL, Sungai Haji Dorani, Malaysia, coll. S. P. Huang and H. M. Huang, 22 April, 2011. NTOUP 2011-05-046, 7 specimens, 58.6-144.9 mm SL, river mouth of Matang mangrove, Malaysia, coll. H. M. Huang, 20 April, 2011. NTOUP 2011-05-047, 3 specimens, 94.6-112.1 mm SL, river mouth of Matang mangrove, Malaysia, coll. H. M. Huang, 21 April, 2011.

Wuhanlinigobius malayensis* Huang,*Zeehan & Chen, 2013**

(Figs. 2m)

Wuhanlinigobius malayensis Huang, Zeehan & Chen, 2013: 152 (Matang, Malaysia) [35].

Material examined:

NTOUP 2012-05-151, 31.3 mm SL, male, Matang mangrove, Malaysia, coll. I-S. Chen and S. P. Huang, 20 April, 2011. NTOUP 2011-05-012, 8 specimens, 20.9-30.5 mm SL, Matang mangrove, Malaysia, coll. I-S. Chen and S. P. Huang, 20 April, 2011. NTOUP 2011-05-022, 8 specimens, 17.9-31.1 mm SL, Matang mangrove, Malaysia, coll. I-S. Chen and S. P. Huang, 21 April, 2011. NTOUP 2011-05-027, 7 specimens, 13.0-25.0 mm SL, Sungai Haji Dorani, Malaysia, coll. S. P. Huang and H. M. Huang, 22 April, 2011.

Remarks

This species has been recognized a new species, the detailed taxonomic treatment and description can be seen in Huang *et al.* [35].

ACKNOWLEDGMENTS

ISC is very grateful for the partial grant support of NSC and the support of CMBB of NTOU. KTS would like to thank NSC and Academia Sinica for their generous grant support. The authors are also very grateful to the personnel in Dr. T. Y. Chan's lab and Dr. Benny Chen's lab as well as Dr. S. C. Ho for their valuable help in the field work. The current also based on the academic cooperation from the MoU between Institute of Marine Biology, NTOU, Taiwan and Institute of Ocean & Earth Science, MU, Malaysia.
