Aetideus acutus(4a/10a/f), *armatus*(6b/8a/f), *bradyi*(3a/11b/f), *divergens*(6a/8b/f), *giesbrechti*(4b/11a/f), *truncatus*(5a/9a/f).

1a	Female	2
1b	Male	7
2a/1b	Posterolateral corners of prosome reaching at least posterior border of urosomite 2	3
2b	Posterolateral corners of prosome at most reaching midlength of urosomite 2	5
3a/2a	Base of rostrum without knobs.....	<i>Aetideus bradyi</i>
3b	Base of rostrum with 2 knobs	4
4a/3b	In dorsal view, rostral plate visible.....	<i>Aetideus acutus</i>
4b	In dorsal view, rostral plate invisible	<i>Aetideus giesbrechti</i>
5a/2b	Posterolateral corners of prosome reaching anterior to posterior border of genital double-somite.....	<i>Aetideus truncatus</i>
5b	Posterolateral corners of prosome reaching at least as far as posterior border of genital double-somite	6
6a/5b	Posterolateral corners of prosome diverge slightly	<i>Aetideus divergens</i>
6b	Posterolateral corners of prosome extending straight backward	<i>Aetideus armatus</i>
7a/1b	Genital somite lateral margins symmetrical	8
7b	Genital somite lateral margins asymmetrical; left margin either simply protruded or with a cleft	9
8a/7a	Posterolateral processes of prosome extending to distal margin of genital somite. Prosome length 2.7 times width	<i>Aetideus armatus</i>
8b	Posterolateral processes of prosome extending to midlength of urosomite 2. Prosome length 2.3 times width	<i>Aetideus divergens</i>
9a/7b	Genital somite: left margin protruded at midlength. Leg 5: segment 3 nearly 2 times as long as segment 2; segment 5 one-fifth length of segment 2	<i>Aetideus truncatus</i>
9b	Genital somite: left margin with a cleft near distal end. Leg 5: segment 3 less than 1.8 times as long as segment 2	10
10a/9b	Posterolateral processes of prosome extending to midlength of genital somite.Prosome length slightly more than 2 times width	<i>Aetideus acutus</i>
10b/9b	Posterolateral processes of prosome extending to distal margin of genital somite. Prosome length 2.5 times or more width	11
11a/10b	Prosome length 4 times length of urosome. Prosome length 3 times width.....	<i>Aetideus giesbrechti</i>
11b	Prosome length 3 times length of urosome. Prosome length 2.5 times width.....	<i>Aetideus bradyi</i>

Aetideus acutus Faran, 1929 (Size: female, 1.42–1.80 mm; male, 1.22–1.98 mm)

Aetideus acutus Faran, 1929

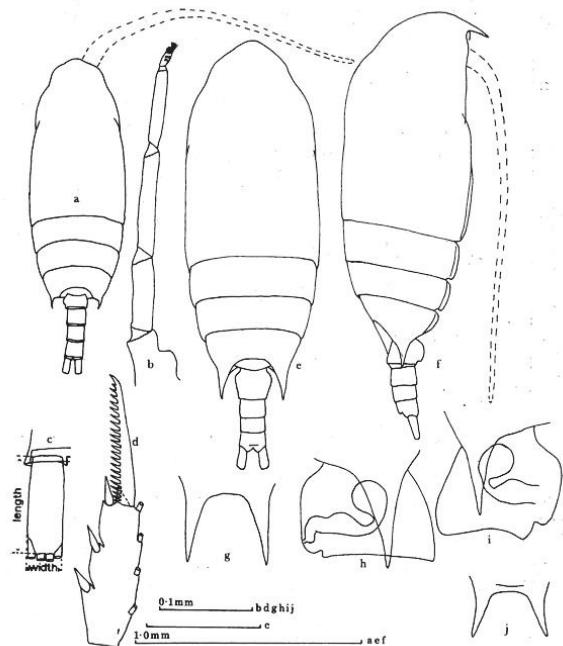

Vervoort, 1957 As *Euaetideus acutus*. Fig. 20 d. *Aetideus acutus* Faran, 1929, Female: distal portion of rostral plate. Fig. 28. Female (from Malay Archipelago): a-b, habitus (lateral/dorsal); c, forehead (lateral); d-e, posterior prosome and urosome (dorsal/lateral). Fig. 29. Female: a, right leg 1 (anterior); b-d, legs 2 to 4 (left legs); e, left maxilla; f, left mandibular palp. Fig. 30. Female: a, left antenna; b, left maxillule; c-d, right antennule; e, mandible cutting edge; f, right maxilliped.

Aetideus acutus Faran, 1929*Original*

Original. *Aetideus acutus*, female, 1.64 mm., off Zhibeng (24°18'N, 121°46'E), habitus (dorsal/lateral); rostrum; leg 4 basis.

Aetideus armatus (Boeck, 1872) (Size: female, 1.33–2.25 mm; male, 1.25–2.10 mm)

Bradford

Original

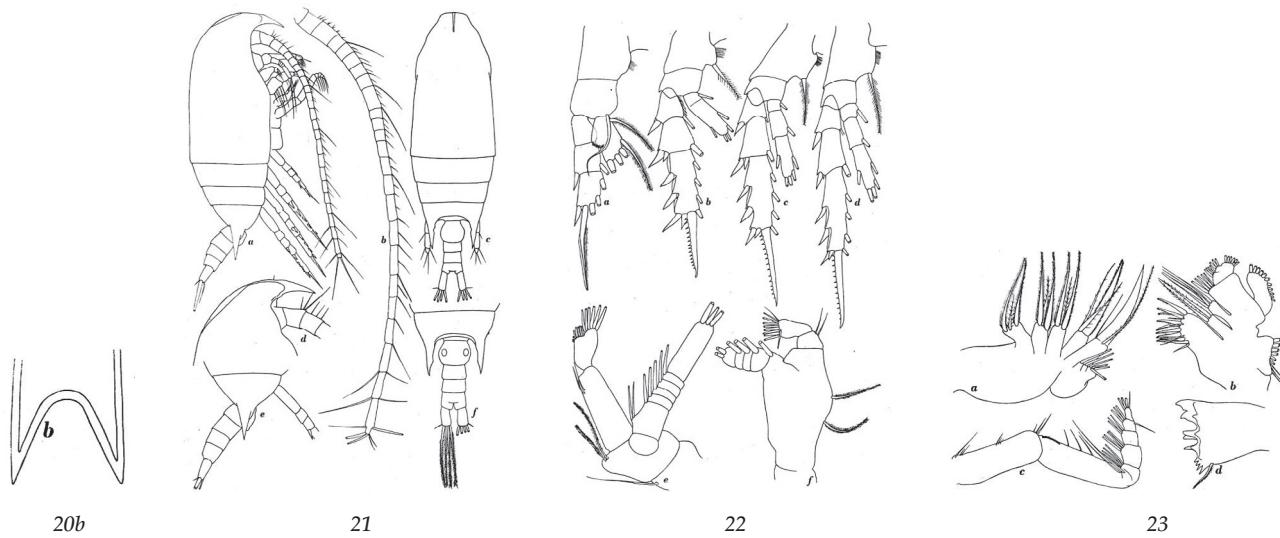

Aetideus armatus (Boeck, 1872)

Bradford, 1971. Fig. 3. From SW Africa (21°–35°S). *Aetideus armatus* (Boeck, 1872), Male: a, habitus (dorsal); b, leg 5; c, caudal ramus; d, exopod segment 3 of leg 3. Nota: Posterior thoracic points extend up to (but not past), the posterior border of urosomal segment 1. Width: length ratio of caudal rami is 1: 2.58–2.70. Terminal seta on legs 2–4 with 24, 22 and 18 teeth respectively. Female: e/f, habitus (dorsal/lateral); g, rostrum; h/i, genital double-somite and posterior thoracic points (lateral left/lateral right); j, rostrum. Nota: Posterior thoracic points just passed the posterior border of the genital double somite, seminal receptacles with a thick, short tube joining the dorsal and ventral sacs. Rostrum: width/depth about 0.86–1.3 (falling within the range of the 2 specimens from Norway). Anterior cephalothorax vaulted, heavily chitinized and when viewed laterally indented above the base of antennule (characteristic not noted in the Norwegian specimens).

Original. *Aetideus armatus*. Female, 1.34 mm, South China Sea, habitus (dorsal/lateral), rostrum; leg 4, coxa & basis.

Aetideus bradyi A. Scott, 1909 (Size: female, 1.33–2.07 mm; male, 1.00–1.50 mm)

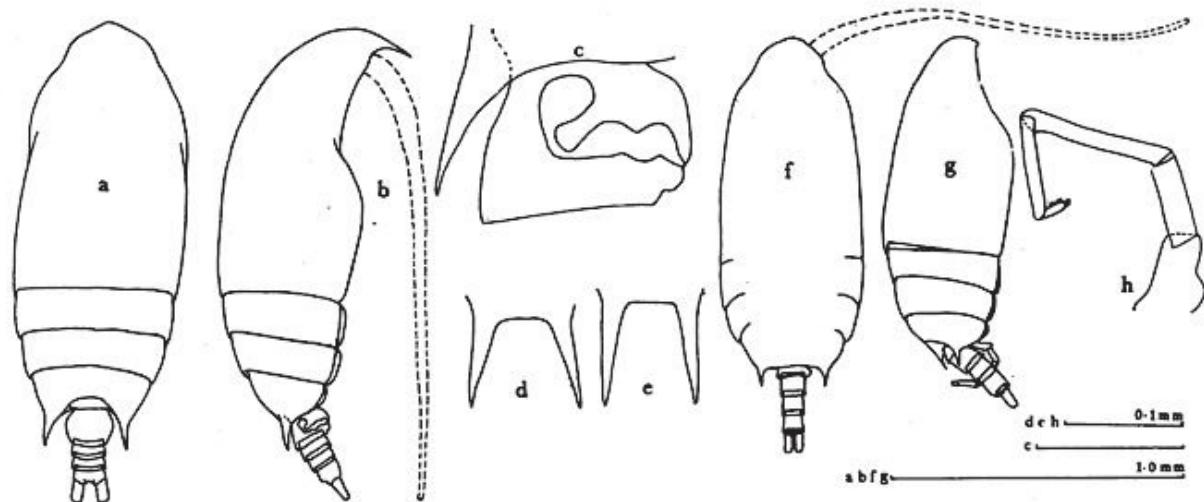

Aetideus bradyi A. Scott, 1909

W. Vervoort, 1957 As *Euaetideus bradyii*. Fig. 20 b. *Aetideus bradyi* A. Scott, 1909, Female: distal portion of rostral plate. Fig. 21. Female: a/c, habitus (lateral/dorsal); b, right antennule; d, forehead (lateral); e/f, posterior prosome and urosome (lateral/dorsal). Fig. 22. Female: a, right leg 1 (anterior); b-d, legs 2 to 4 (left legs); e, right antenna; f, right mandibular palp. Fig. 23. Female: a, right maxilla; b, left maxillule; c, left maxilliped; d, mancible (cutting edge).

Aetideus divergens Bradford, 1971 (Size: female, 1.69–1.90 mm; male, 1.25–1.43 mm)

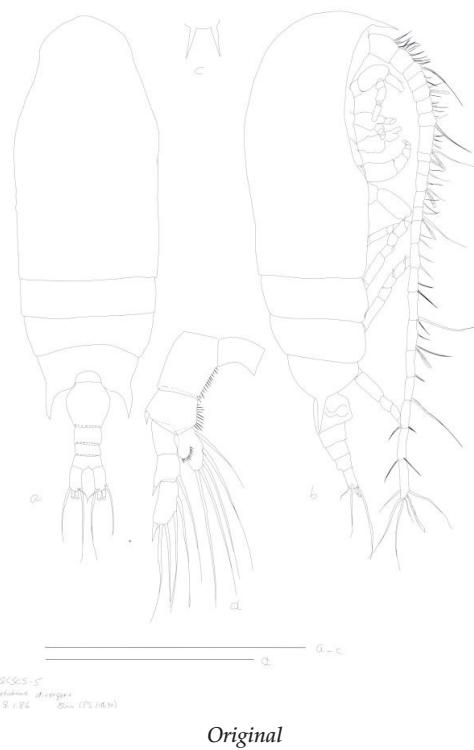

Bradford, 1971

Aetideus divergens Bradford, 1971

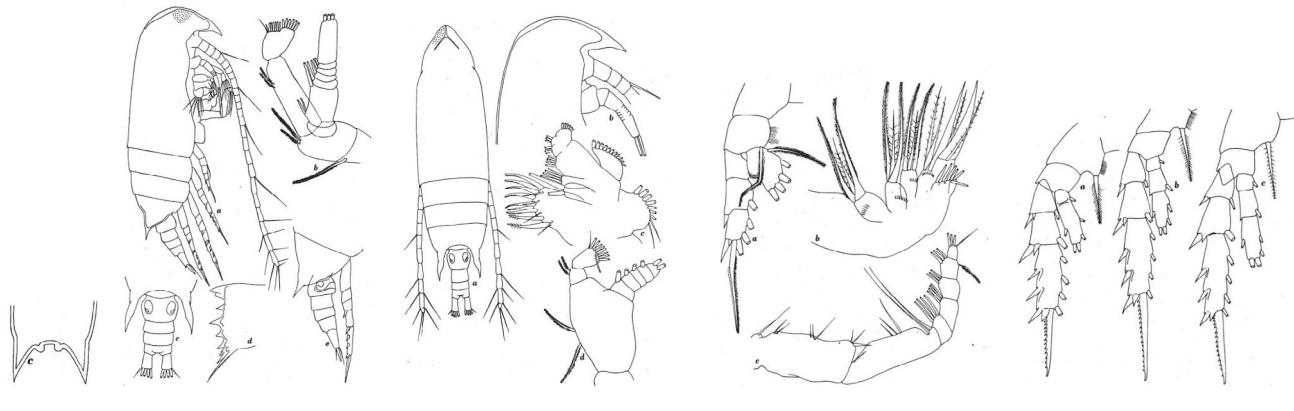

Bradford, 1971. *Aetideus divergens* Bradford, 1971, Fig. 9; From off British Columbia: 52°02'N, 132°53'W. Female: a/b, habitus (dorsal/lateral); c, genital double-somite and posterior prosome points (lateral right side); d, e, rostrum (from two specimens). Nota: Seminal receptacle with a moderately long thick tube, about 4 times as long as wide, connecting the dorsal and ventral sacs. Mouth parts and swimming legs identical with those of *A. armatus*. Male: f/g, habitus (ventral/lateral right); h, leg 5. Nota: Rostrum absent. All appendages as in *A. australis*.

Actideus giesbrechti Cleve, 1909

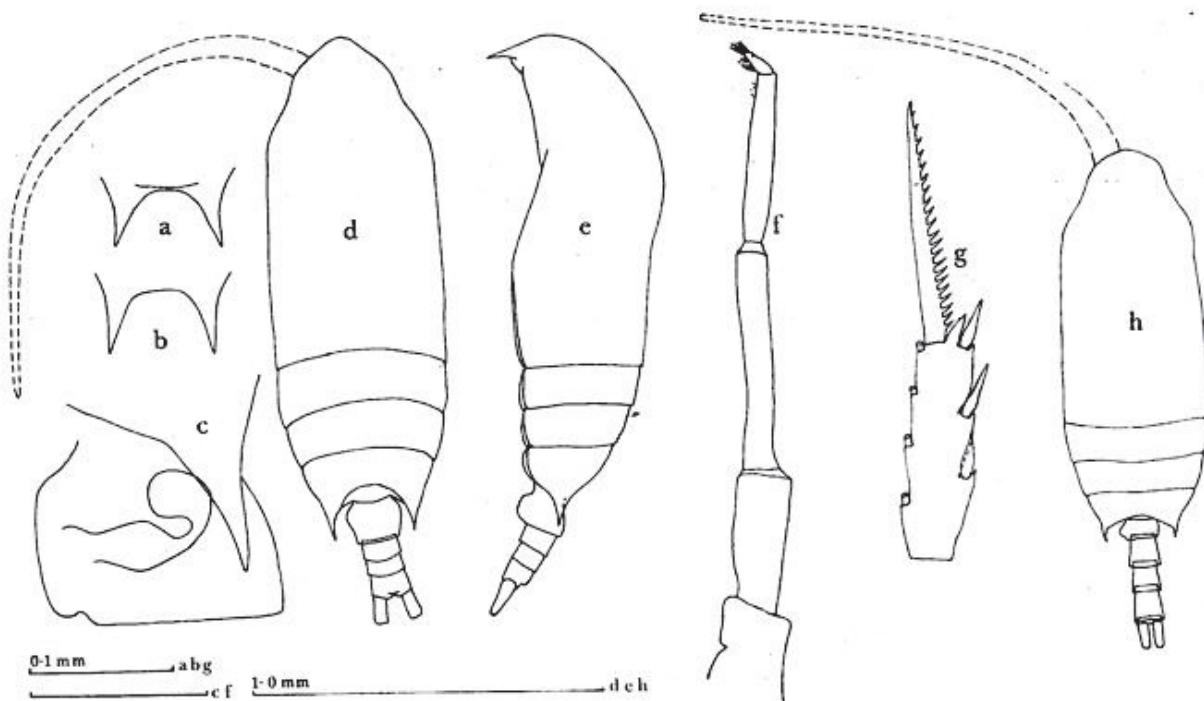

Vervoort, 1957. As *Euaetideus giesbrechti*. Fig. 20c. Female: distal portion of rostral plate. Fig. 24. Female (from E Indian): a, habitus (lateral); b, left antenna; c/e, posterior part of prosome and urosome (dorsal/lateral); d, mandible (cutting edge). Fig. 25. Female: a, habitus (dorsal); b, forehead (lateral); c, left maxillule; d, left mandible (mandibular palp). Fig. 26. Female: a, right leg 1 (anterior); b, left maxilla; c, left maxilliped. Fig. 27. female: a-c, legs 2 to 4 (left legs).

Adapted from Razouls C., de Bovée F., Kouwenberg J. and Desreumaux N., 2005–2020. Diversity and Geographic Distribution of Marine Planktonic Copepods. Sorbonne University, CNRS. Available at <http://copepodes.obs-banyuls.fr/en> [Accessed May 14, 2021].

Aetideus giesbrechti Cleve, 1909*Aetideus giesbrechti*
Cleve, 1909

Original. *Aetideus giesbrechti* Cleve, 1909. Female, 1.56 mm., South China Sea, habitus (dorsal/lateral).

Actideus truncatus Bradford, 1971 (Size: female, 1.60–1.80 mm; male, 1.45 mm)

Bradford, 1971

Bradford, 1971. Fig. 10. From NE pacific: 22°59'N, 107°13' W. *Actideus truncatus* Bradford, 1971, Female: a, b, rostrum (from two different specimens); c, genital double-somite and posterior prosomal point (lateral left side); d/e, habitus (dorsal/lateral). Nota: Rostrum: Width: Depth ratio = 1.46–1.84 (see Fig. 5c to *A. australis*). Head vaulted above mandible and Mx1 (in lateral view). Seminal receptacle with a thick neck joining dorsal and ventral sacs. Mouth parts and swimming legs are identical with those of *A. armatus*. Male: f, P5; g, exopod segment 3 of leg 3; h, habitus (dorsal). Nota: Rostrum absent. Fusion line between pedigers 4 and 5 visible dorsally. The terminal exopod spines on leg 3 with 21 teeth (these teeth appear to be more widely spaced than in *A. armatus*).
